SUMMARY

Passionate and curious data enthusiast equipped with over a year of professional experience in software, data, and building data-based applications. Driven by a love for experimentation, problem-solving, and continuous learning.

EDUCATION

Georgia Institute of Technology Jan 2026 – Present
M.S. - Computational Data Analytics

Hunter College, City University of New York Aug 2022 – Dec 2025
B.A. - Computer Science, Focus in Human Biology — GPA: 3.5

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, Java, SQL
Libraries: TensorFlow, PyTorch, Pandas, Scikit-Learn, Selenium, Seaborn, Flask, React, Next.js, NLTK
Tools: Git, Tableau, Jupyter Notebook, BigQuery, AWS, Hugging Face, Docker, PySpark, Hadoop, Azure, PowerBI
Databases: PostgreSQL, MongoDB, Neo4j, Supabase, Amazon S3

EXPERIENCE

Software Consultant Mar 2026 – Present
FAST Enterprises

- Modernizing unemployment insurance software for the State of Oregon across tax, benefits, and revenue systems
- Engineered a machine learning algorithm to detect scenarios where the agency incorrectly denied claims, enabling the recovery and distribution of **millions of dollars** in unemployment benefits
- Developed data pipelines that reduced processing time and operational costs for tax report generation processes and claimant wage and benefit calculations by an average of **85%**

Solutions Engineer Lead Oct 2025 – Present
Feline Tails

- Built an **AWS**-powered backend to facilitate a marketplace-based model for cat owners and sitters, along with a vector-based matching algorithm, optimizing utilization ratios by **40%**
- Directing an innovation team dedicated to identifying new opportunities and driving business improvement through AI, ML, and data-driven solutions, increasing net revenue by **63%**
- Designed **DeepSeek**-based Agents to automate revenue reporting and marketing workflows, including targeted email campaigns and lead identification

Data Science Intern Jun 2025 – Aug 2025
Memorial Sloan Kettering Cancer Center

- Oversaw complete development cycle of **BERT**-based model to extract clinical entities from documents, ensuring HIPAA compliance and achieving **95%** F1-score and outperforming an industry-ready benchmark model of 91%
- Designed Natural Language Processing (NLP) and LLM data pipeline with **SpaCy** and **Bedrock Claude**, processing over 10,000 documents to create a **22%** more accurate dataset for model fine-tuning
- Conducted comparative analysis of various open source models, including Bi-LSTMs and CRFs for NLP tasks and image segmentation and classification models for pathology scans to benchmark performance for future initiatives

PROJECTS

The Lounge - MSKCC Hackathon 1st Place | *Claude, AWS, LangChain* Aug 2025

- Developed an **AWS-based Agentic AI** social media app with an efficient RAG retrieval pipeline using **OpenSearch**, **Amazon S3**, and **AWS Lambda** to create a scalable and secure solution for young adults
- Features two key agents through **Bedrock Claude** and **SageMaker**, directing users to requested resources and helping schedule appointments along with an SMS confirmation through **Pinpoint**

EZ-RX-ID | *PyTorch, LangChain, Embeddings, Computer Vision, Supabase, REST API* Feb 2025 - Jun 2025

- Full stack AI application that identifies prescription pills from images and generates medical summaries from queries using an **Agentic Retrieval-Augmented Generation (RAG)** System with **DeepSeek**
- Trained multiple **ResNet-18** models to extract pill attributes (shape, color, imprint) and combined their outputs using an **XGBoost** classifier, resulting in a top-5 accuracy of **93%**
